

AMENDMENT TO THE CLAIMS

Please amend claim 1, 5, 10-12 to read as follows:

Please add new claims 18-22.

1. (Currently Amended) A method for searching for a folder ~~in a menu of a wireless device,~~ comprising:
 - receiving, at a remote server, one or more initial search parameters from ~~the a~~ wireless device, the one or more initial parameters different from a menu navigation command of the wireless device; ~~wherein the remote server comprises a script processor configured to provide further search parameters based on responses to one or more queries displayed on the wireless device, the one or more queries being displayed upon the activation of a script, wherein the script is activated in response to the receipt of the one or more initial search parameters by the remote server;~~
 - activating a script in the remote server in response to the receipt of the one or more initial search parameters, wherein activating includes sending one or more queries to the wireless device;
 - receiving further search parameters from the wireless device in response to the one or more queries;
 - identifying a folder based on the one or more initial search parameters and any further search parameters obtained responsive to the one or more queries provided by the script processor, wherein the identified folder is part of a preexisting deck maintained by said remote server; and
 - communicating the identified folder to said wireless device for performing a menu navigation to the identified folder.

2. (Previously Presented) The method of claim 1, wherein the script is associated with a navigation command, each of the one or more queries associated with the one or more initial search parameters.

3. (Canceled)

4. (Previously Presented) The method of claim 2, wherein the script further includes one or more operations that performs one of facilitating a purchase based on the one or more queries, facilitating a reservation based on the query and placing a phone call based on the query.

5. (Currently Amended) A method for searching for a folder or an item in a menu of a wireless device, comprising:

receiving, at a remote server, one or more initial search parameters from the a wireless device, the one or more initial parameters different from a menu navigation command of the wireless device; ~~wherein the remote server comprises a script processor configured to provide further search parameters based on responses to one or more queries displayed on the wireless device, the one or more queries being displayed upon the activation of a script, wherein the script is activated in response to the receipt of the one or more initial search parameters by the remote server;~~

activating a script in the remote server in response to the receipt of the one or more initial search parameters, wherein activating includes sending one or more queries to the wireless device;

receiving further search parameters from the wireless device in response to the one or more queries;

identifying a selection of a plurality of folders and/or a plurality of items based on the one or more initial search parameters and any further search parameters provided by the script processor, each of the plurality of folders and items being part of a preexisting deck maintained by said remote server;

communicating a second menu to the wireless device based on the identified selection operation.

6. (Previously Presented) The method of claim 5, wherein the second menu is a flat menu that includes two or more identified items.

7. (Previously Presented) The method of claim 6, wherein the second menu includes at least one text message that contains at least one of the one or more initial search parameters.

8. (Previously Presented) The method of claim 6, wherein the script is associated with a navigation command, each of the one or more queries associated with the one or more initial search parameters.

9. (Previously Presented) The method of claim 5, wherein the second menu is a hierarchical menu that includes two or more identified folders.

10. (Currently Amended) A device-remote server for searching for a folder or item in a menu of to send to a wireless device, comprising:

an interface at a remote server that configured to receives one or more initial search parameters from the wireless device, the one or more initial parameters different from a menu navigation command of the wireless device; ~~wherein the remote server comprises a script processor configured to provide further search parameters to the interface based on responses to one or more queries displayed on the wireless device, the one or more queries being displayed upon the activation of a script, wherein the script is activated in response to the receipt of the one or more initial search parameters by the remote server;~~

a script processor configured to activate a script in response to the receipt of the initial search parameters;

the script processor further configured to send any queries required by the script to wireless device via the interface;

the interface further to receive from the wireless device further search parameters responsive to one or more queries;

a database;

a search ~~device-engine~~ that performs a search operation of the database based on the one or more initial search parameters and any further search parameters ~~provided by the script processor~~, the search operation identifying at least one folder and/or at least one item, the at least one folder and at least one item each being part of a preexisting deck maintained by ~~said remote server~~the database and ~~communicated to the wireless device~~; and

a managing device that provides information to the wireless device based on the search operation; ~~wherein~~ the information provided includes one of the at least one identified folder and/or the at least one identified item or a portion of a second menu ~~is provided for display on the wireless device, and wherein the second menu is formed based on the provided information.~~

11. (Currently Amended) The device of claim 10, wherein the information provided to the wireless device ~~displays~~ includes the at least one identified folder and/or the at least one identified item.

12. (Currently Amended) The device of claim 10, wherein the information provided to the wireless device displays a portion of the second menu.

13. (Previously Presented) The device of claim 12, wherein the second menu is a flat menu that includes two or more identified items.

14. (Previously Presented) The device of claim 12, wherein the second menu is a hierarchical menu that includes two or more identified folders.

15. (Previously Presented) The device of claim 12, wherein the second menu includes at least one text message that contains at least one of the one or more initial search parameters.

16. (Canceled)

17. (Previously Presented) A device of claim 10, wherein the script processor accesses information relating to an external network in response to the script.

18. (New) A method for a remote server to provide information folders to a wireless device, comprising:

- receiving a request from the wireless device for a folder, the folder containing items, wherein items include files, links and subordinate folders;

- if the request includes a navigational command, then executing the navigational command to identify the folder;

- if the request includes a search parameter and the search parameter is associated with a script, then activating the script;

- if the script was activated and the script specifies a query, then sending the query to the wireless device;

- if the query was sent to the wireless device, then receiving any additional search parameter from the wireless device responsive to the query;

- if the request includes the search parameter, then searching a database for items based on the search parameter and any additional search parameter;

- if the database was searched, then selecting the folder based on items found in searching the database; and

- sending the selected folder to the wireless device.

19. (New) The method of Claim 1, wherein selecting a folder further comprises selecting a folder found in searching the database that contains all other items found in searching the database.

20. (New) The method of Claim 1, wherein selecting a folder further comprises creating a folder to contain all items found in searching the database and selecting the created folder.

21. (New) The method of Claim 1, wherein selecting a folder further comprises selecting a folder found in searching the database that contains a plurality of items found in searching the database.

22. (New) The method of Claim 1, wherein selecting a folder further comprises creating a folder to contain a plurality of items found in searching the database and selecting the created folder.
